

## REPORT ON INTERNATIONAL EPILEPSY DAY

**Name of the event:** International Epilepsy Day

**Date:** 14<sup>TH</sup> February, 2026

**Time:** 3 pm – 5 pm.

**Venue:** Smt. Vimladevi Khyalilalji Vagarecha College of Nursing Education, Thane.

On the occasion of International Epilepsy Day, the students of 4th Semester B.Sc. Nursing organized a meaningful and informative program under the guidance of Ms. Pradnya Gaikar and Mrs. Amruta Parab. The event was successfully conducted in the college auditorium on 14th February 2026 with the aim of creating awareness about epilepsy, its management, and the importance of eliminating myths associated with the disorder.

The program commenced with a formal inauguration by our respected Principal Madam, Mrs. Chitra Naik, who addressed the gathering and introduced the theme of International Epilepsy Day. She emphasized the importance of spreading awareness about epilepsy, promoting early diagnosis, and providing appropriate care and support to individuals affected by the condition. Her motivating words encouraged students to actively participate in health education and community awareness initiatives.

The celebration began with an informative seminar on epilepsy presented by the students, Mr. Abhishek and Ms. Harshada. The seminar provided comprehensive knowledge about epilepsy, including its definition, causes, types of seizures, clinical manifestations, diagnostic methods, treatment, and nursing management. The presentation was highly educational and helped the audience understand the condition better.

This was followed by a live demonstration performed by the students focusing on myths and facts related to epilepsy. The demonstration effectively highlighted common misconceptions about epilepsy and provided scientifically accurate information to promote awareness and reduce social stigma. The activity was interactive and received positive appreciation from the audience.

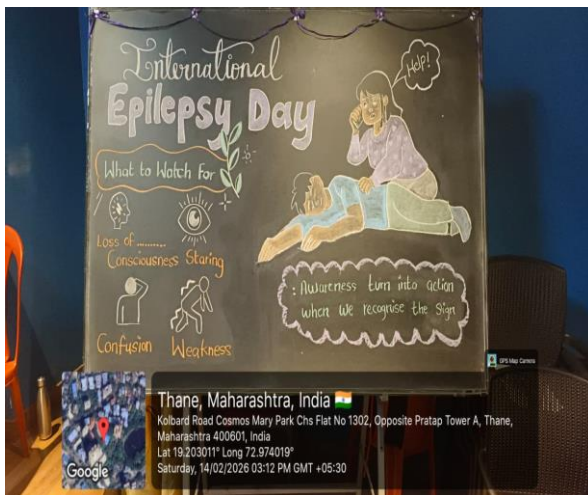

To make the event more engaging and interactive, an educational game titled “Insight into the Epileptic Brain” was conducted. The game enhanced students’ understanding of epilepsy in an interesting manner and encouraged active participation, thereby reinforcing the knowledge gained during the seminar.

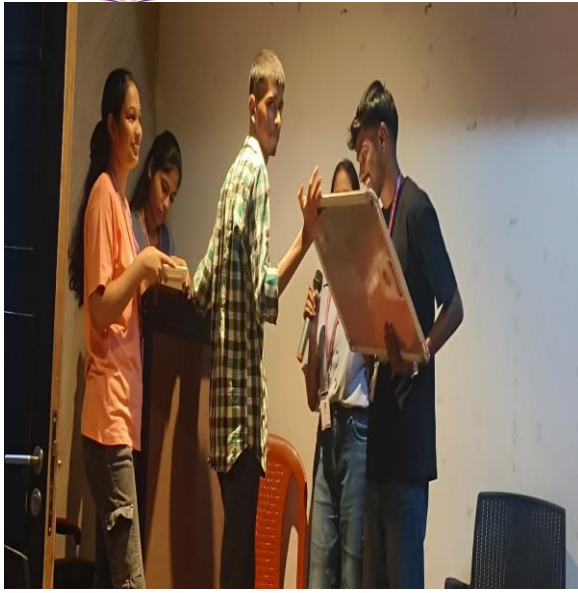

The program concluded successfully with active participation from students and faculty members. The event served as an excellent platform to enhance awareness, promote health education, and develop a sense of responsibility among nursing students towards community health.

The winners of the game “Insight into the Epileptic Brain” were appreciated and recognized for their enthusiastic participation and excellent performance. They were congratulated and honored by the faculty, and their achievements were warmly applauded by their batchmates. The appreciation encouraged a spirit of healthy competition, teamwork, and active learning among the students, making the program more memorable and motivating for all participants.

I would like to express my sincere gratitude to the management, our respected Principal Madam, and all the teaching and non-teaching staff for their constant support, encouragement, and valuable guidance in making this event a grand success.
